

Super Hush Puppy

Advanced Bark Control Collar

*Humanely Stops Barking
With Progressively Increasing Sound*

OPERATING INSTRUCTIONS

Features:

1. Humane, uses no shock and causes no pain or discomfort to your pet
2. Small and lightweight.
3. Water resistant, rain and snow will not affect operation. If fully immersed, the unit should be allowed to dry and new battery installed.
4. Operates on a standard 6 volt alkaline battery.
5. Voice recognition feature minimizes false triggering.

Introduction:

Your new SUPER HUSH PUPPY sonic bark control collar is an advance electronic device that represents the most effective anti-barking device made. The Super Hush Puppy is controlled by a microprocessor which distinguishes your dog's bark from other environmental noises and automatically delivers an audible tone after each bark. The output level of the tone is automatically increased throughout four levels as barking continues. Sound level is reset once barking ceases for more than thirty seconds. The Super Hush Puppy's unique pattern of increasing sound quickly teaches your pet that it is its own bark that is causing the discomfort. The result is a quicker, painless and more humane approach to bark control.

Principles of Operation:

The Super Hush Puppy uses a microphone to detect your dog's bark. At the first bark, the tone sounds for one-half second. If your dog barks again within thirty seconds, the tone sounds for approximately one second. After the third bark, the tone is increased to two seconds and increased again to three seconds after the fourth bark. If the dog continues to bark with less than thirty seconds between each bark, the tone sounds for approximately three seconds after each bark. If your dog ceases barking for thirty seconds or more, the tone is reset to level one and will sound for only one-half second after the next bark. The use of the warning tone followed by increasingly more intense tones sets up a pattern that your dog will quickly learn is caused by its own barking. At each step, your dog gets to choose whether it's worth the increasing level of discomfort to bark again. We have found this technique of progressively increasing sound is not only more humane, it is more EFFECTIVE in breaking the barking habit than any other non-shock bark control collars, and is only found on the SUPER HUSH PUPPY made by High Tech Pet Products, Inc.

Installing/Replacing the Battery

To access the battery compartment, firmly push down on the engraved area of the plastic case and slide the battery door open.

Install the new battery between the “clip” and “spring” contacts. Note that the “spring” contact is for the negative end and the “clip” contact is for the positive end.

Replace the battery door. When properly in place it should snap shut. Normal battery life is three to four months. Replace the battery when the tone becomes noticeably softer, or stops altogether.

Putting the Super Hush Puppy on Your Dog.

Place the unit around your dog's neck and adjust the collar length using the slide buckle arrangement provided with the strap. The unit should fit snugly yet, comfortably underneath your dog's neck.

Caution Notes:

1. Do not allow your dog to chew this collar. You should also attempt to minimize scratching of clawing at the casing.
2. This device is made up of plastic and electronic components that are not digestible. Consult your vet if your dog swallows any part of this product.
3. The collar is not intended for use as a restraining collar. If you are using a leash, use it with a separate restraining type of collar.
4. Although the Super Hush Puppy's microprocessor is designed to differentiate your dog's individual bark from stray environmental noises, the unit may occasionally be activated by other vibrations or sounds. This is normal but it should not happen so often as to be confusing to your pet. If the unit is falsely triggered by excessive scratching, shaking of the head or rolling on the ground, your pet may be suffering from fleas or ear mites. If these activities are evident, have your pet checked by a veterinarian for parasites.
5. The Super Hush Puppy is designed to be water resistant, but is not fully immersible. It's okay to let your dog wear the unit in the rain, but be sure to remove it before bathing your pet or allowing it to swim. If the device gets very wet or submerged in water, remove the battery and allow the unit to dry completely for at least a couple of days. Install a new battery before using.

Product Upgrade Credit:

Your new Super Hush Puppy has been proven to be more than 90% effective in solving tough nuisance barking problems without painful shock. If however, you feel your dog is in the 10% of animals for which sound is not completely effective, we will be happy to apply the cost of your HP-2 unit toward our state of the art Bark Terminator BT-1 unit which uses progressively increasing sound plus progressively increasing electric shock. You pay only the difference in the price to upgrade to the BT-1. Check our website or call the customer service number below for complete details.
